Site Health

 Should be improved

Status

Info

Site Health Status

The site health check shows information about your WordPress configuration and items that may need your attention.

1 critical issue

Critical issues are items that may have a high impact on your sites performance or security, and resolving these issues should be prioritized.

Autoloaded options could affect performance

Performance 

Autoloaded options are configuration settings for plugins and themes that are automatically loaded with every page load in WordPress. Having too many autoloaded options can slow down your site. Your site has 1055 autoloaded options (size: 982 KB) in the options table, which could cause your site to be slow. You can review the options being autoloaded in your database and remove any options that are no longer needed by your site.
