## **Add Links to Images in Single Posts Plugin by MBSMGROUP**

The “**Add Links to Images in Single Posts**” plugin is a simple yet powerful tool designed to enhance the way images are presented and interactable on your WordPress website. This plugin automatically wraps all images in single posts with a clickable link that points to the image URL. Additionally, it uses the post title for the `alt` and `title` attributes of images, improving both SEO (Search Engine Optimization) and accessibility.

### **Key Features of the Plugin**

#### **1. Automatic Linking for Images:**

- The plugin automatically converts all images in your single blog posts into clickable links, making the images more interactive and improving the user experience.
- Each image is wrapped in a link pointing to the image’s URL, allowing users to click on an image to view it in its original size.

#### **2. SEO and Accessibility Benefits:**

- By adding the post title as the `alt` and `title` attributes to the images, the plugin improves SEO rankings and enhances accessibility.
- Search engines use the `alt` attribute to understand the content of an image, which can help your site rank higher in search results.

- The `title` attribute helps screen readers provide context to visually impaired users, making the website more accessible.

### 3. Customizable Settings:

- **Enable/Disable Image Linking:** The plugin provides an option to enable or disable the automatic linking of images.
- **Custom Alt and Title Text:** You can customize the default `alt` and `title` text that is applied to the images, or leave them as the post title to make the images more descriptive.

### 4. Easy Installation:

- The plugin is straightforward to install and configure. Simply upload the plugin ZIP file to your WordPress dashboard, activate it, and the plugin will work automatically on all single posts.

### 5. Developer-Friendly:

- Built with best practices in mind, the plugin offers flexibility for developers who want to extend its functionality. It is fully compatible with WordPress's coding standards and is easy to integrate with other plugins or custom themes.
