Enhance Your WordPress SEO with the Content Analysis and Sitemap Generation Plugin by Mbsmgroup

In the ever-evolving world of SEO, having a well-structured sitemap is crucial for ensuring that search engines can efficiently crawl and index your website. Enter the **Content Analysis and Sitemap Generation Plugin** by **Mbsmgroup**, a powerful and reliable tool designed to simplify sitemap creation while prioritizing safety, capability, and trust. Whether you're a seasoned developer or a WordPress enthusiast, this plugin is here to elevate your website's SEO game.

Why Choose the Content Analysis and Sitemap Generation Plugin?

1. **Safety First**
   At Mbsmgroup, we understand that security is paramount. Our plugin is built with robust coding practices to ensure your website remains secure while generating sitemaps. All user inputs are sanitized and validated, and we use WordPress best practices to prevent vulnerabilities. You can trust that your website is in safe hands.
2. **Unmatched Capability**
   This plugin goes beyond basic sitemap generation. It creates **separate sitemaps** for:
   - Pages
   - Posts
   - PDFs
   - Images
   - Attachments
   - Tags
   - Titles (with both title and URL)

   Each sitemap is meticulously organized, and a **sitemap index file** (`mbsm.xml`) is generated to reference all individual sitemaps. This ensures that search engines can easily navigate and index your content.

3. **Trusted Developer**
   Mbsmgroup is committed to delivering high-quality, reliable solutions. With years of experience in WordPress development, we've designed this plugin to be user-friendly, efficient, and scalable. Whether you're managing a small blog or a large e-commerce site, our plugin adapts to your needs.

Key Features

- **Customizable Settings**:
  - Set sitemap update frequency (hourly, daily, weekly, monthly, yearly, or never).
  - Adjust page priority in the sitemap (a value between 0 and 1).
  - Control the number of links per sitemap file to optimize performance.

- **Manual Sitemap Generation**:
  - Generate sitemaps with a single click from the WordPress admin dashboard.
  - Sitemap files are stored in a dedicated folder (`custom_sitemaps`) for easy access.

- **Titles Sitemap**:
  - A unique feature that includes both the title and URL of posts, providing additional context for search engines.

- **Scalable and Efficient**:
  - Handles large websites by splitting sitemaps into smaller files based on your specified link limit.

How It Works

1. **Install and Activate**:
   Upload the plugin to your WordPress site and activate it.
2. **Configure Settings**:
   Navigate to **Settings > Content Analysis** to customize sitemap frequency, priority, and links per file.
3. **Generate Sitemaps**:

Click the “Generate Sitemap Files” button, and the plugin will create separate sitemaps for all content types.

4. **Submit to Search Engines**:
   Use the generated sitemap index URL (`https://yourwebsite.com/custom_sitemaps/mbsm.xml`) to submit your sitemap to search engines like Google and Bing.

Why Trust Mbsmgroup?

At Mbsmgroup, we believe in transparency, reliability, and excellence. Our plugin is designed with:

- **Clean Code**: Adhering to WordPress coding standards for optimal performance.
- **Regular Updates**: Ensuring compatibility with the latest WordPress versions.
- **User-Centric Design**: Making it easy for both beginners and experts to use.

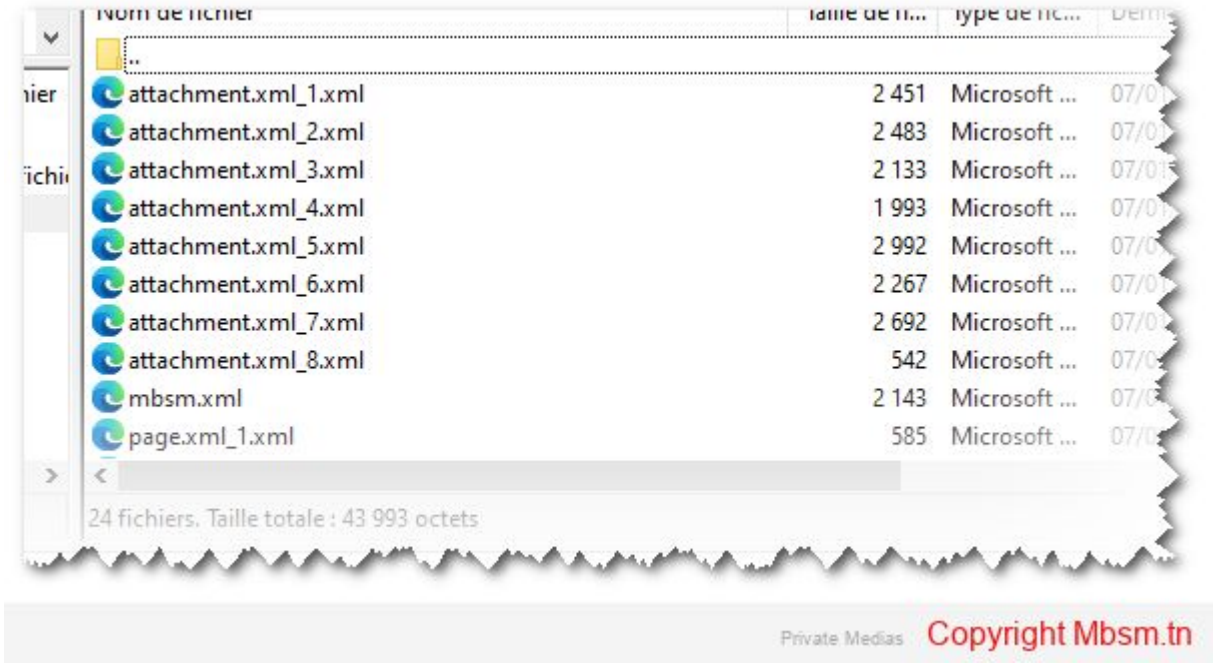

We’re not just developers; we’re your partners in building a better online presence.
